Attention: Prasoon Adhikari, P.Eng., PMP

The Corporation of the City of Guelph 1 Carden Street, Guelph, ON N1H 3A1

Project Name: Baker Street Project Number: CE751900 .A.CS.EV.A2 Filed: \\KWO\Proj\Guelph\CE751900\500\530\02\01

Subject: Update to the Phase One Environmental Site Assessment for 55 Baker Street, 152, 160 Wyndham Street North, and Park Lane, Guelph, Ontario, dated October 18, 2018

Dear Mr. Prasoon Adhikari,

1. Background and Purpose

This Phase One Environmental Site Assessment (ESA) update has been prepared by CH2M HILL Canada Limited (now Jacobs Engineering Group Inc. [Jacobs]) on behalf of the City of Guelph (City) for the properties at 55 Baker Street, 152 and 160 Wyndham Street North, and the right-of-way known as Park Lane in Guelph, Ontario (Site or Property). Jacobs understands the City intends to redevelop the Site to a mix of residential, community, institutional, and commercial land use, which requires a Record of Site Condition (RSC) for the change to a more sensitive land use. The Site and the Phase One Study Area (defined as lands located within 250 metres [m] of the Site) are shown on Figure 1.

A Phase One ESA dated October 30, 2018, was completed by Pinchin Ltd. for the properties located at 55 Baker Street, 152 and 160 Wyndham Street North, Chapel Lane, and Park Lane (Pinchin 2018). The Chapel Lane right-of-way included in the Pinchin Phase One ESA is not part of the Site, as there is no proposed property use change for the roadway, and therefore, an RSC is not required.

The Ontario Ministry of the Environment, Conservation and Parks (MECP) indicates, per Section 28(1) of Ontario Regulation (O. Reg.) 153/04 (MECP 2011a), a Phase One ESA may be used to support an RSC filing if the report is dated no later than 18 months before the RSC's submission or the start of the Phase Two ESA. Therefore, to support an RSC filing for the Site, the 2018 Phase One ESA report must be reviewed and, if necessary, updated to meet the requirements of Section 28(2) of O. Reg. 153/04. The update report must document how the combined reports meet the requirements and objectives of O. Reg. 153/04.

The Qualified Person for ESA (QPESA) has reviewed the Pinchin Phase One ESA and determined that while the content generally meets the requirements of O. Reg. 153/04, the Records Review, Interviews, and Site

Reconnaissance sections of the report require further consideration because of additional available information and the passage of time since the 2018 Phase One ESA was completed.

The following sections document the steps taken to update the Pinchin Phase One ESA to meet the general and specific requirements of O. Reg. 153/04 regarding Phase One ESAs.

2. Phase One Property Information

The Site information has been updated from the information provided in the Pinchin Phase One ESA to account for the removal of Chapel Lane from the revised Site boundaries.

The Site is approximately 1.15 hectares and consists of a triangular asphalt parking lot (55 Baker Street), a rectangular asphalt parking lot (152 and 160 Wyndham Street), and an asphalt laneway (Park Lane). The geographical coordinates of the centroid of the Site are 560486.69 (easting) and 4821808.00 (northing) based on North American Datum 83 (UTM zone 17N).

Table 1 summarizes the updated legal descriptions and related Property Identification Number (PIN) for the Property.

Municipal Address	Property Identification Number	Legal Description
55 Baker Street	71287-0038 (LT)	PT Burying Ground; PT Lane through Burying Ground; Plan 8, Closed by MS80255; as in CS58221, MS20082 & MS78644; S/T Interest, if any, in CS58221
55 Baker Street	71287-0058 (LT)	PT Burying Ground, Plan 8; as in CS%1962; Guelph
160 Wyndham Street North	71287-0044 (LT)	PT Lot 74, Plan 8; PT Burying Ground, Plan 8; PT Lane, Plan 8, at the rear of Lot 74 (AKA Park Lane) Closed By CS31228, as in ROS557919; S/T & T/W ROS557919.
152 Wyndham Street North	71287-0045 (LT)	PT Lots 73 & 74, Plan 8; PT Burying Ground, Plan 8; PT Lane, Plan 8, at the rear of Lots 73 & 74 (AKA Park Lane) Closed By CS31228, as in RO573090; S/T & T/W RO573090;
Park Lane	71287-0099 (LT)	Unnamed Lane, Plan 8, (AKA Park Lane, Plan 8) Lying South of Part Closed by CS31228, save and except RO755787, ROS546721, CS52867, & ROS220056; Guelph

Table 1. Property Information

55 Baker Street, 152 and 160 Wyndham Street North, and Park Lane, Guelph, Ontario

Attachment A presents a copy of the Property's plan of survey, dated June 22, 2020, prepared by Van Harten Surveying Inc., an Ontario land surveyor.

3. Records Review

The Pinchin Phase One ESA was completed in October 2018. Based on Jacobs' familiarity with the Site and discussions with Mr. Prasoon Adhikari, Environmental Engineer with the City's Engineering and

Transportation Services, the Site has only operated as a parking lot from 2018 to present, with ongoing environmental assessment work occurring. The QPESA therefore proposes that it is reasonable to assume the results outlined in the Pinchin Phase One ESA remain valid, and an update is not warranted for the following:

- 1) Chain-of-title search for the Site
- 2) City Directory searches for the Site
- 3) Information readily available for the Site from MECP, as obtained through a Freedom of Information request
- 4) Information regarding retail fuel storage tanks for the Site as maintained by the Technical Standards and Safety Authority
- 5) Topographical, physiographical, and geological mapping within 250 metres (m) of the Site (the Phase One Study Area)

The record review update therefore focused on the following areas:

- 1) Readily available Fire Insurance Plans (FIPs) that were not summarized in the Pinchin Phase One ESA
- 2) Reports prepared by Jacobs and others pertaining to environmental conditions at the Site
- 3) New federal, provincial, and private-source database records for the Phase One Study Area, available through an ERIS Environmental Risk Information Service (ERIS) database search
- 4) Recent aerial photographs for the Phase One Study Area from October 2018 to present
- 5) Identification of areas of natural significance, wellhead protection areas, and groundwater information for the Phase One Study Area

The QPESA has summarized the review of each of the main sources of information as follows.

3.1 Phase One Study Area Determination

Site boundaries are shown on Figure 1. A Phase One Study Area is defined by O. Reg. 153/04 as "...the area that includes a phase one property, any other property that is located, wholly or partly, within 250 m from the nearest point on a boundary of the phase one property and any property that the qualified person determines should be included as a part of the phase one study area..." The approximate limits of lands within 250 m of the Site are shown on Figure 1. The Phase One Study Area was expanded beyond 250 m from the Site, as shown on Figure 1, to include entire industrial and commercial properties.

Based on the information obtained as part of the Phase One ESA, the Phase One Study Area is anticipated to include adjacent properties that could reasonably be interpreted to materially and adversely affect environmental conditions onsite.

3.2 Fire Insurance Plans

Insurance products (FIPs, inspection reports, and site-specific reports) are generally available for lands developed for commercial or industrial purposes sometime into the 1960s or 1970s. Based on the *Catalogue of Canadian fire insurance plans, 1875–1975*, FIPs were prepared for the City for the years 1878, 1897, 1911, 1916, 1929, 1946, and 1960.

FIPs dated 1897¹, 1911, 1916, 1946, and 1960 were attained and reviewed by Pinchin in the Phase One ESA.

Jacobs re-reviewed these FIPs prior to undertaking the Phase Two ESA activities, as well as the 1892 and 1929 FIPs, which were readily available online (limited resolution) from the Guelph Museums.

Jacobs identified the following four additional potentially contaminating activities (PCAs) on the Site:

- Former Oil Shed (PCA 57) The 1911 FIP showed a small oil shed in the southwestern corner of the White Sewing Machine of Canada parcel of land on 55 Baker Street.
- Former Oil House (PCA 58) The 1911 FIP showed a small oil house on the former White Sewing Machine of Canada parcel, now the western portion of 152 Wyndham Street.
- Former Coke Storage (PCA 59) The 1911 FIP showed a garage located on the northeastern portion of 55 Baker Street.
- Former Garage (PCA 60) The 1960 FIP showed a garage located on the northeastern portion of 55 Baker Street.

Jacobs identified an additional 56 offsite PCAs: PCAs 61-63, 65-67, 70-73, 75-86, 88-90, 92-97, 99, 100, 102, 103, 105-109, 112-114, 116-127, 129. Details are documented in Table 1 – Potentially Contaminating Activities.

3.3 Environmental Reports

Jacobs has identified two additional Site-specific environmental reports since the 2018 Phase One ESA: a draft Phase Two ESA (Jacobs 2020a) and an accepted Modified Generic Risk Assessment (Jacobs 2020b). The additional environmental reports are summarized in Attachment B.

The two additional reports discuss the subsurface investigations completed and the soil and groundwater quality based on these investigations; assess risk to human and ecological receptors; and develop risk management measures to protect human health and the environment.

These reports did not identify additional PCAs and do not materially change the areas of potential environmental concern (APECs) or the contaminants of concern identified for the Site.

3.4 ERIS

The 2018 Pinchin Phase One ESA included an ERIS search conducted in June 2017. The 2017 ERIS report had a total of 368 records, 3 of which were associated with the Phase One Study Area. Because of the passage of time and the potential for recent activities to have affected the Site (for example, spills), Jacobs requested an updated ERIS report in December 2020 for the Site and the Phase One Study Area, included as Attachment C.

The 2020 ERIS report had a total of 562 records, 7 of which were associated with the Property, and 555 of which were associated with properties located within the Phase One Study Area. The ERIS report was reviewed with a focus on records for properties hydraulically upgradient and directly adjacent to the Site.

¹ Only one sheet (Sheet 5) was attained for the 1897 FIP, which did not include the Site but was within the Phase One Study Area.

Records of interest not included in the 2017 ERIS Report for the Property include the following:

 One waste generator record for July 2020 for halogenated solvents and residues, other specified organic sludges, slurries, or solids, and waste oils/sludges

This record is consistent with the required waste disposal during ESA activities (that is, investigationderived wastes) and therefore would not indicate an additional PCA.

Records of interest not included in the 2017 ERIS report or not identified in the Pinchin Phase One ESA (2018) for properties within the Phase One Study Area include the following:

- One RSC record for a former commercial property located at 52 Baker Street and 45 Yarmouth Street, changing to a more sensitive land use (residential). The property is directly adjacent to the west of the Site. No exceedances of the Table 2 Site Condition Standards in soil or groundwater were identified, and no certificate of property use was issued. This record is related to a previously identified PCA (PCA 6), and details have been added to Table 1.
- One spill record identified a historical underground storage tank at 34 Wyndham Street North based on a report of a leak in 1991 caused by corrosion, where 450 litres of hydraulic oil were released to soil and groundwater.
- Multiple records identified seven historical printing operations (potential bulk storage of ink):
 - 72 Norfolk Street A printing company (Central Printing Services) was identified based on ERIS Scott's Manufacturing records, indicating an established date of 1961.
 - 123 Woolwich Street Former publishing operations (Ampersand Printing, ID Magazine, Ribbon Encore Inc.) were identified based on ERIS waste generator records from 1986 to 2008.
 - 55 Wyndham Street A newspaper publisher (Echo Weekly) was identified at 55 Wyndham Street North (Suite T 19B) based on ERIS Scott's Manufacturing records, indicating an established date of 1997.
 - 27 Wyndham Street A former printing operation (Kwik Kopy Printing) was identified based on ERIS Scott's Manufacturing records.
 - 46 Cork Street East A former printing business (The Printery) was identified as established in 1990 based on ERIS Scott's Manufacturing records.
 - 19 Cork Street East A former printing operation (Justified Type) was identified in 1987 based on ERIS Scott's Manufacturing records and waste generator records for 2005 to 2012.
 - 14 Macdonell Street The Thompson Co. Ltd. Guelph Daily Mercury was located at 8-14 Macdonell Street, as identified on the 1960 FIP. The ERIS report identified Scott's Manufacturing and waste generator records from 1989 to 2014 for paint, pigments, coatings, aromatic solvents, waste oils, and photo processing wastes. In 2002, a fire-related spill of 100 gallons of soy-based ink was identified based on ERIS spill records.
- One Scott's Manufacturing record identified a potential former textile manufacturer (manufacturing of "all other textile product mills" identified as Buy the Yard) located at 214 Woolwich in 1989.
- One Scott's Manufacturing record identified vehicle parts manufacturing, specifically, a former motor vehicle brakes manufacturer (ABS Friction Corp.) at 199 Woolwich Street in 1996.

Noted records of interest resulting in additional PCAs have been detailed in Table 1. The remaining records in the ERIS report are generally consistent with what has been reported in the Pinchin Phase One ESA (2018) and therefore were previously identified as PCAs or are not considered to be a PCA.

3.5 Physical Setting Sources

3.5.1 Aerial Photographs

The Pinchin Phase One ESA (2018) reviewed aerial photography from 1930, 1964, 1972, 1981, and 1995, as well as Google Earth satellite imagery from 2006, 2009, and 2013. Google Earth imagery from 2014, 2016, 2018, and 2019 was reviewed as part of the Phase One ESA Update.

Based on the additional satellite imagery reviewed, no significant changes were observed, and the Site appears to be in continual use as a parking lot and roadway (Park Lane). The parking building observed on the 2006 to 2013 imagery in the west-central portion of the Property is not seen on the 2018 and 2019 imagery, which is consistent with its reported removal in 2016 (Pinchin 2018). Apart from a residential tower construction to the east of the Site, no material changes to the Phase One Study Area were observed in the 2018 and 2019 imagery, which correlates to the previously noted RSC record in the ERIS report (see Section 3.4). The review of the additional satellite imagery does not reveal information that would materially change the PCAs identified for the Site and Phase One Study Area in the Pinchin Phase One ESA.

3.5.2 Water Bodies, Areas of Natural Significance, and Ground Water Information

Speed River is the nearest downgradient waterbody, approximately 130 to 150 m north-northeast of the Site, and ground surface tends to slope north towards the river. Groundwater from the region is likely to eventually discharge to Speed River. The Site is not considered part of an area of natural significance or to be within the proximity of an area of natural significance². Attachment D shows the area of natural significance significance mapping information provided from ERIS.

Properties in the Phase One Study Area are served by a municipal drinking water system sourced by groundwater drawn primarily from the Gasport Formation, estimated to occur at least 45 metres below ground surface. The City categorizes regions of Guelph within wellhead protection areas. The Site is within Wellhead Protection Area B (2-year travel time) for several of the City's municipal water supply wells (see Figure 5). The nearest municipal groundwater supply wells to the Site include the Water Street, Edinburgh, Membro, and Dean Wells (approximately 1.4 to 2.0 kilometres [km] south of the Site past Eramosa River), and the Park and Emma Wells (approximately 1.3 to 1.5 km north of the Site past Speed River).

The City is also part of the Grand River Source Protection Plan (Plan) (Lake Erie Region Source Protection Committee 2019). The Plan assigns Drinking Water Threat Vulnerability Scores across the region based on various risk factors, and the Phase Two Property has been assigned a Vulnerability Score of 10, the highest score possible. According to Plan mapping (Figure 5), the Site is also in a highly vulnerable aquifer and issues-contributing area, but it is not in a significant groundwater recharge area or in a source water intake protection zone.

² It is noted that the Pinchin Phase One ESA identified Kimberly Park, located 65 m northeast of the Site, as an area of natural significance; however, based on the reviewed mapping, this was likely reported in error.

Attention: Prasoon Adhikari, P.Eng., PMP January 27, 2021 Page 7 of 12

Well map records listed in the MECP well database (MECP 2020) were searched within the Phase One Study Area (up to a radius of 500 m) for completeness to supplement the data summarized in the Pinchin Phase One ESA. The well locations are plotted on Figure 6. No wells within the Phase One Study Area were identified as supplying water for human consumption or agricultural use.

4. Interviews

For this Phase One ESA Update, Jacobs interviewed Mr. Prasoon Adhikari, Environmental Engineer with Engineering and Transportation Services, in the City's Infrastructure, Development and Environmental Engineering department (Site Representative). Mr. Adhikari has been familiar with the Site since before the completion of the 2018 Pinchin Phase One ESA to the present. The interview information is briefly summarized as follows:

- 1) The City remains the current Site owner
- 2) From 2018 to present, the Site has remained in use as a parking lot and roadway.
- The Site Representative is not aware of any other events, changes, or concerns that may have materially affected the Site's environmental condition since the completion of the 2018 Pinchin Phase One ESA.

No new PCAs or APECs were identified based on the interview with the Site Representative.

Based on the additional information evaluated, the specific and general objectives of O. Reg. 153/04 in terms of Interviews have been met by the 2018 Pinchin Phase One ESA and this Phase One ESA Update.

5. Site Reconnaissance

A Site reconnaissance was completed by Jacobs on December 15, 2020. The weather was partially sunny and minus 5 degrees Celsius. Jacobs was represented by Ms. Brandi Wilson, and the Site reconnaissance lasted approximately 40 minutes. The Site was in use as an active parking lot and roadway at the time of the investigation.

Representative photographs taken during the Site reconnaissance are provided in Attachment E.

5.1 Specific Observations at the Phase One Property

The following paragraphs summarize the specific observations related to the Property on December 15, 2020, that differ from the observations reported on May 26, 2017, as presented in the 2018 Pinchin Phase One ESA.

5.1.1 Stains and Surface Observations

No notable staining was observed during the previous Site reconnaissance completed in spring 2017. During the winter Site reconnaissance, salt stains from winter parking lot maintenance and snow storage were observed at the Property. This is consistent with PCA 56 / APEC-4 – use of road salts.

5.1.2 Presence of Wells

No wells, as defined by the *Ontario Water Resources Act* (that is, likely used or used as a source of water for human consumption), were identified to be present onsite during the previous Site reconnaissance or the 2020 Site reconnaissance. Several monitoring wells were present during the previous Site reconnaissance that were installed as part of the Phase Two ESA (Jacobs 2020a).

5.2 Investigation of Accessible Lands within the Phase One Study Area

No significant changes were noted to the Phase One Study Area based on the Site reconnaissance, except for the following:

- Transformer located directly behind the 146 Wyndham Street North building. The pad-mounted transformer is located approximately 15 m east and is situated hydraulically downgradient of the Property. No concrete staining was observed during Site reconnaissance.
- Transformer located in the parking lot of 40 Baker Street. The pad-mounted transformer is located approximately 25 m west and is situated hydraulically upgradient of the Property. No concrete staining was observed during Site reconnaissance.
- Transformer located adjacent to a new condo building at 45 Yarmouth Street. The pad-mounted transformer is located approximately 50 m west and is situated hydraulically upgradient of the Property. No concrete staining was observed during Site reconnaissance.

These three transformers were identified as PCAs (68, 69, and 74) and are included in Table 1.

Based on the additional information evaluated, the specific and general objectives of O. Reg. 153/04 in terms of Site Reconnaissance have been met by the 2018 Pinchin Phase One ESA and this Phase One ESA update.

6. Review and Evaluation of Information

6.1 Current Past Uses

The summary table of the current and past land uses, provided as Table 2, has been updated by Jacobs to reference the parcels by municipal addresses and PINs, include additional information, and provide details in a form approved by the MECP.

6.2 Potentially Contaminating Activity

Table 1 provides descriptions and details of 129 PCAs documented by Pinchin (2018) and Jacobs, 8 that occurred on the Site and 121 that occurred within the Phase One Study Area. Locations of onsite PCAs (and corresponding APECs) are shown on Figure 8. Locations of offsite PCAs (and any resulting APECs) are shown on Figure 9. Table 1 includes the information source and references for each identified PCA, and the rationale of whether the PCA resulted in an APEC onsite.

No information was identified of a regional PCA that may reasonably be interpreted to affect environmental conditions onsite.

Attention: Prasoon Adhikari, P.Eng., PMP January 27, 2021 Page 9 of 12

Determination of groundwater flow direction was based on the Site-specific investigations conducted within the Property and on the area topography. It is anticipated that the offsite groundwater flow is towards Speed River. Both Site-specific and regional groundwater flow are shown on Figure 8. It is noted that some of the original rationale presented in the Pinchin Phase One ESA (that is, inferred groundwater flow directions) were reinterpreted based on the updated Site-specific information from the available Phase Two ESA (Jacobs 2020a). The resulting APECs are discussed in Section 6.3.

6.3 Areas of Potential Environmental Concern

Twenty-two APECs were identified at the Site from the Pinchin Phase One ESA and the Phase One ESA Update: eight APECs attributable to onsite PCAs, and fourteen APECs attributable to offsite PCAs within the Phase One Study Area. The APEC locations are presented on Figure 10 and are summarized in Table 3. Contaminants of potential concern have been identified for each APEC in Table 3 based on historical operations and type of PCA associated with each APEC.

6.4 Phase One Conceptual Site Model

An updated Phase One conceptual site model has been compiled to incorporate the findings of the Phase One ESA Update to the 2018 Pinchin Phase One ESA. Details and descriptions have been provided in Table 4, which includes references to the appropriate figures provided in this Phase One ESA Update.

7. Conclusions

In closing, the QPESA has reviewed the Phase One ESA (Pinchin 2018) and, where appropriate, has updated the Property Information, Records Review, Interview, and Site Reconnaissance sections to meet the general and specific requirements of O. Reg. 153/04 as they pertain to Phase One ESAs. The updated Phase One ESA information is contained in this report, and therefore, the original 2018 Phase One ESA and this update can together support the Phase One ESA requirements for the RSC filing for the Site. As indicated in the 2018 Phase One ESA, a Phase Two ESA is required to support filing the RSC.

8. Limitations

This report has been prepared in accordance with generally accepted environmental engineering practices for the exclusive use of the City. Third parties cannot rely upon the findings and conclusions presented without express written consent of Jacobs and the City through an extension of reliance using a reliance letter signed by both parties. Jacobs accepts no responsibility for damages, if any, incurred by any third party as a result of decisions made or actions based on this report. This report serves as the update to the Pinchin Phase One ESA report titled *Final Phase One Environmental Site Assessment, 55 Baker Street, 152, 160 Wyndham Street North, Chapel and Park Lane, Guelph, Ontario*, dated October 30, 2018. For a complete set of limitations associated with the 2018 Phase One ESA that should be read in conjunction with this update, please refer to Section 8.2 of that report.

Attention: Prasoon Adhikari, P.Eng., PMP January 27, 2021 Page 10 of 12

9. Signatures

The findings and conclusions of this Phase One ESA Update have been supervised and reviewed by the undersigned Qualified Person.

As QPESA, I (Tania McCarthy) confirm that I have supervised the carrying out of the Phase One ESA Update, findings, and conclusions of this report. In addition, as Senior Technical Reviewer for this report, I (Ed Taves) confirm that I have completed a technical review of the Phase One ESA and concur with the findings and conclusions of this report.

Sincerely

Tania faity

28	Gasoline and Associated Products Storage in Fixed Tanks	4	Historical Retail Fuel Outlet – operations were identified at 160 Woolwich Street and showed four associated gasoline USTs fronting on Woolwich on the 1929 FIP, and two gasoline USTs on the 1960 FIP.	160 Woolwich Street	Offsite	YES	APEC-6	Hydraulically downgradient, but adjacent to the Phase One Property	FIP			1929, 1960		
37	Operation of Dry Cleaning Equipment (where chemicals are used)		Historical Dry Cleaning - Potential dry cleaners were identified at 164-166 Woolwich Street on FIPs (1929, 1946). The building is labeled as "Cleaning & Dyeing" on the 1929 FIP with a small area in the back labeled "Dry Cleaning. The 1946 FIP has the building relabeled as "Clothes Cleaning". City directories list Card, JM Co. Cleaners and Dyers and Woolwich Cleaners and Tailors at 164-166 Woolwich between 1917 and 1955.		Offsite	YES	APEC-5	Hydraulically downgradient, but adjacent to the Phase One Property	FIP, CDL			1929, 1946		1917 to 1955
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	6	Historical Automotive Garage – An automotive garage (Swanston L B Auto Repair and Heffernon Motor Car Co. Garage) was identified at 45 Yarmouth Street from approximately 1929 to 1960 based on FIPs and City directories. A Record of Site condition record was noted to have been filed in July 2020 for a change from commercial to residential land use; no Table 2 SCS exceedances were reported in the soil and groundwater at the property.	45 Yarmouth Street / 52 Baker Street	Offsite	YES	APEC-12	Hydraulically upgradient and adjacent to the Phase One Property	FIP, ELE			1929, 1946	19: RSC	1936 to 1960
28	Gasoline and Associated Products Storage in Fixed Tanks	7	Historical USTs - Two USTs identified on Yarmouth Street on the 1929 and 1946 FIPs were associated with the historical automotive repair/servicing operations at 45 Baker Street.	On Yarmouth Street/ behind 45 Yarmouth / 52 Baker Street	Offsite	YES	APEC-12	Hydraulically upgradient and adjacent to the Phase One Property	FIP			1929, 1946		
34	Metal Fabrication	8	Historical Offsite Industrial Operations - Industrial manufacturing and potential metal fabrication was noted along Yarmouth Street from as early as 1929. Cooke & Denison Machine and Tool Works was identified at 40 Baker Street on FIPs from 1929 to 1960.	40 Baker Street	Offsite	YES	APEC-11	Hydraulically upgradient and adjacent to the Phase One Property	FIP			1929, 1946, 1960		
28	Gasoline and Associated Products Storage in Fixed Tanks	9	Historical UST - One UST identified on the 1946 FIP on the southwest portion of 40 Baker Street.	South of #29-40 Baker Street	Offsite	YES	APEC-11	Hydraulically upgradient and adjacent to the Phase One Property	FIP			1946		
28	Gasoline and Associated Products Storage in Fixed Tanks	10	Historical UST - One UST identified within the northwest portion of 2 Baker Street (historically 22 Baker Street), in a building labeled 'auto' occupied by Guelph Creamery (1946 FIP).	2 Baker Street	Offsite	YES	APEC-22	Hydraulically upgradient and adjacent to the Phase One Property	FIP			1946		
37	Operation of Dry Cleaning Equipment (where chemicals are used)	11	Historical Dry Cleaning - Ferguson's Cleaners, a potential dry cleaning operation was listed in the city directories at 2 Quebec Street in 1975.	2 Quebec Street	Offsite	YES	APEC-22	Hydraulically upgradient and adjacent to the Phase One Property	CDL					1975
37	Operation of Dry Cleaning Equipment (where chemicals are used)		Potential Historical Dry Cleaning - "Chinese Laundry" was located at 152 Woolwich Street from at least 1911 to 1946 based on FIPs (1911, 1929, 1946) and city directories (Lee, Lee Laundry from 1917 to 1936). It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.		Offsite	YES	APEC-7	Hydraulically downgradient, but adjacent to the Phase One Property	FIP, CDL			1911, 1929, 1946		1917 to 1936
28	Gasoline and Associated Products Storage in Fixed Tanks	13	Historical Fuel Oil Underground Storage Tank (UST) – A historical UST was identified at 176 Wyndham Street North along the west exterior wall (beside the garage and repairs building) on the 1960 FIP.	-	Offsite	YES	APEC-9	Hydraulically downgradient, but adjacent to the Phase One Property	FIP			1960		
55	Transformer Manufacturing, Processing and Use	14	Transformer - One pad-mounted oil cooled transformer was identified during the Pinchin Site Visit (in 2018) on the west exterior portion of 138 Wyndham Street North. No staining was observed on the concrete slab in the vicinity of the transformer, and no evidence of leakage was observed during the Site reconnaissance.	Behind 138 Wyndham Street North	Offsite	NO		Hydraulically upgradient/ transgradient of the Phase One Property, but nature of PCA is shallow soil contamination	SR					
28	Gasoline and Associated Products Storage in Fixed Tanks	15	Historical Service Station - a former auto servicing and refueling station was located at 145 Woolwich with 4 gasoline USTs located out front, on Woolwich Street. The service station existed from at least 1929 to 1960 based on the FIPs and city directories (Simpson, CT, Service Station).	145 Woolwich Street	Offsite	NO		Hydraulically downgradient of the Phase One Property	FIP, CDL			1929, 1946, 1960		1936 to 1944
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	16	Historical Automotive Repair - Auto repair/servicing activities by Muller Bros were present at 135-139 Woolwich Street from at least 1936 until 1960 based on FIPs and city directories.	135-139 Woolwich Street	Offsite	NO		Hydraulically downgradient of the Phase One Property	FIP, CDL			1946, 1960		1936 to 1946

28	Gasoline and Associated Products Storage in Fixed Tanks	17	Dieschiptoris on CAS (III Hase one CAS summary) Diesel AST - One emergency diesel-fired emergency generator with an associated belly- tank was identified on the west exterior portion of 138 Wyndham Street North during the Pinchin Site Visit (in 2018). No staining was observed on the concrete slab in the vicinity of the emergency generator and no evidence of leakage was observed during the Site	Behind 138 Wyndham Street North	Offsite	NO	Aite	Hydraulically upgradient/ transgradient of the Phase One Property, but nature of PCA is shallow soil contamination	SR					
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	18	Historical Automotive Repair - Heffernan Motors, a historical garage, was identified at 146 Wyndham Street North (from approximately 1930 until 1946) based on city directories.	146 Wyndham Street North	Offsite	YES	APEC-13	Hydraulically upgradient/ transgradient and adjacent to the Phase One Property	CDL					1930 to 1949
37	Operation of Dry Cleaning Equipment (where chemicals are used)	19	Potential Historical Dry Cleaning - potential dry cleaning operations were identified at 108 Wyndham Street North from 1917 to 1922 based on city directories (Gemmel & Co. Dyers and Cleaners).	108 Wyndham Street North	Offsite	YES	APEC-15	Hydraulically downgradient, but adjacent to the Phase One Property	CDL					1917 to 1922
31	Ink Manufacturing, Processing and Bulk Storage	20	Historical Printing Operation - Printing indicated in back of 90-96 Wyndham Street North on the 1929 and 1946 FIPs. City directories list Kelso Printing Co., at 96 Wyndham Street North in 1936.	96 Wyndham Street North	Offsite	NO		Hydraulically downgradient of the Phase One Property	FIP, CDL			1929, 1946		1936
37	Operation of Dry Cleaning Equipment (where chemicals are used)	21	Potential Historical Dry Cleaning - "Chinese Laundry" was identified at 70 Wyndham Street North on the 1911 and 1916 FIP. Based on city directory searches, these operations were present until approximately 1922 under Young Wong Laundry. It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.	70 Wyndham Street North	Offsite	NO		Hydraulically transgradient, and distance is greater than 50 m from the Phase One Property	FIP, CDL			1911, 1916		1916 to 1922
37	Operation of Dry Cleaning Equipment (where chemicals are used)	22	Potential Historical Dry Cleaning - "Chinese Laundry" was identified at 55-57 Quebec Street from approximately 1910 to 1946 based on FIPs and city directories (Lee Wing Laundry present from 1910 to 1939). It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.		Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	FIP, CDL			1911, 1916, 1929, 1946		1910 to 1939
37	Operation of Dry Cleaning Equipment (where chemicals are used)	23	Potential Historical Dry Cleaning - "Cleaning and Pressing" at 49 Quebec Street on 1911 and 1916 FIPs, and Chas Kutt cleaner listed in the city directories from 1910 to 1916. It is noted that PCE was not being readily used in dry cleaning until the 1930s.	49 Quebec Street	Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	FIP, CDL			1911, 1916		1910 to 1916
37	Operation of Dry Cleaning Equipment (where chemicals are used)	24	Potential Historical Dry Cleaning - Starkman Cleaning and Pressing, a potential dry cleaning operation was listed at 31 Quebec Street, from 1916 until 1917. It is noted that PCE was not being readily used in dry cleaning until the 1930s.		Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	CDL					1916 to 1917
28	Gasoline and Associated Products Storage in Fixed Tanks	25	Historical UST - the 1946 FIP identified one UST under the roadway at 7 Quebec Street.	7 Quebec Street	Offsite	YES	APEC-16	Hydraulically upgradient/ transgradient to the Phase One Property	FIP			1946		
37	Operation of Dry Cleaning Equipment (where chemicals are used)	26	Potential Historical Dry Cleaning - a building labelled 'cleaning and pressing', a potential dry cleaning operation was identified at 17 Quebec Street in the 1946 FIP.	17 Quebec Street	Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	FIP			1946		
other	Activity not defined in O. Reg. 153/04 Table 2 of Schedule D	27	Historical Gasoline Spill – Base on database searches, a historical gasoline spill (80 Litres) at the intersection of Chapel Lane and Baker Street occurred in 2003, with possible environmental impact to land and water.	intersection of Chapel Lane and Baker Street	Offsite	YES	APEC-14	Hydraulically upgradient and adjacent to the Phase One Property	ELE				8: SPL	
28	Gasoline and Associated Products Storage in Fixed Tanks	28	Historical Service Station and USTs - The 1929 and 1946 FIPs identified a gasoline UST at 88 Norfolk Street, in front of the automotive garage on Norfolk Street. The 1960 FIP identifies a gasoline service station in place of the garage, with 3 USTs within the property and an associated address of 90 Norfolk Street.	Norfolk and Commercial Street (88 / 90 Norfolk Street)	Offsite	NO		Hydraulically upgradient/ transgradient, but distance is greater than 100 m from the Phase One Property	FIP			1929, 1946, 1960		
28	Gasoline and Associated Products Storage in Fixed Tanks	29	Historical UST - the 1946 FIP identified one gasoline UST at 17 Quebec Street	behind 19-23 Quebec Street	Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	FIP			1946		
37	Operation of Dry Cleaning Equipment (where chemicals are used)	30	Potential Historical Dry Cleaning - "Chinese Laundry" was indicated at 13 Quebec Street on the 1916 FIP. The city directories indicate Ontario Laundry is present from 1917 to 1930. It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.		Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Distance is greater than 50 m from the Phase One Property	FIP, CDL			1916		1917 to 1930
28	Gasoline and Associated Products Storage in Fixed Tanks	31	Historical Gasoline Service Station - a refueling station with 3 associated USTs is identified on the 1946 FIP at 46-48 Cork Street East.	46-48 Cork Street East	Offsite	NO		Hydraulically transgradient, and distance is greater than 50 m from the Phase One Property	FIP			1946

37	Operation of Dry Cleaning Equipment (where chemicals are used)	34	Potential Historical Dry Cleaning - "Chinese Laundry" was indicated at 34 Quebec Street on the 1911 FIP. Elm Bros Laundry was identified in the city directories at 34 Quebec Street from 1910 until 1916. It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.	34 Quebec Street	Offsite	NO		Based on site-specific groundwater flow, this location is hydraulically transgradient from the Phase One Property. Based on the nature of the indicated services, the likelihood that the operations included dry cleaning are very low.	FIP, CDL			1911		1910 to 1916
28	Gasoline and Associated Products Storage in Fixed Tanks	35	Historical Oil Cellar - Bond Hardware Co. Ltd. was located at 42-56 Wyndham Street North. This property was labelled on the 1892, 1911 and 1916 FIPs as containing an 'oil cellar under the sidewalk' at the northwest exterior corner of this building.	St. George Square	Offsite	NO		Hydraulically transgradient, and distance is greater than 50 m from the Phase One Property	FIP			1892, 1911, 1916		
31	Ink Manufacturing, Processing and Bulk Storage	36	Historical Printing Operation - Clark Printer, a historical printing operation was listed in city directories at 14 Wyndham Street North in 1901.	14 Wyndham Street North	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	CDL					1901
31	Ink Manufacturing, Processing and Bulk Storage	37	Historical Printing Operation – Turnbull Wright Co. Printers, a historical printing operation was listed in city directories at 13 Wyndham Street North in 1901.	13 Wyndham Street North	Offsite	NO		Hydraulically transgradient, and distance is greater than 100 m from the Phase One Property	CDL					1901
28	Gasoline and Associated Products Storage in Fixed Tanks	38	Historical UST - the 1946 FIP identified one UST at 106 Quebec Street	106 Quebec Street	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	FIP			1946		
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	39	Historical Automotive Repair - 'Garage & Repairs' were identified in the 1946 FIP at 106 Quebec Street.	106 Quebec Street	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	FIP			1946		
31	Ink Manufacturing, Processing and Bulk Storage	40	Historical Printing Operation - Herald Printing, a historical printing operation was identified at 65 Quebec Street in the 1892, 1897, and 1911 FIPs.	65 Quebec Street	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	FIP			1892, 1897, 1911		
37	Operation of Dry Cleaning Equipment (where chemicals are used)	41	Potential Historical Dry Cleaning - Based on city directories Sam Sing Landry, a potential dry cleaning operation was identified at 146 Quebec Street in 1917 until 1939. It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.	146 Quebec Street	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	CDL					1917 to1939
37	Operation of Dry Cleaning Equipment (where chemicals are used)	42	Potential Historical Dry Cleaning - Chinese Laundry, a potential dry cleaning operation was identified at 101 Quebec Street in 1910 until 1944 on city directories and on the 1911 FIP. It is noted that this laundry service was typically hand-laundry and not likely dry cleaning; in addition, PCE was not being readily used in dry cleaning until the 1930s.	101 Quebec Street	Offsite	NO		Hydraulically transgradient/ downgradient, and distance is greater than 100 m from the Phase One Property	FIP, CDL			1911		1910 to 1944
28	Gasoline and Associated Products Storage in Fixed Tanks	43	Historical Aboveground Storage Tank (AST): - Vent and fill pipes associated with an AST were observed at the corner of 20 Quebec Street, a southern adjacent property to the Site during the Pinchin Site Visit (in 2018).	20 Quebec Street	Offsite	YES	APEC-16	Hydraulically upgradient and adjacent to the Phase One Property	SR					
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	44	Historical Automotive Repair - a garage is identified at 169 Woolwich Street on the 1929 FIP, with an 'Auto Ignition and Battery Service' under construction on the 1946 FIP.	173 Woolwich Street	Offsite	NO		Hydraulically downgradient of the Phase One Property	FIP			1929, 1946		
28	Gasoline and Associated Products Storage in Fixed Tanks	45	Historical Gasoline Service Station - a refueling and auto service station with 4 associated USTs is identified on the 1929 and 1946 FIPs at the southwest corner of Woolwich and Suffolk Streets. City directories indicate service stations (White Rose Service Station, Can Oil Co's Ltd. Service Station and Daley's Tire Shop Ltd & Service Station) present up to	192 Woolwich Street	Offsite	NO		Hydraulically transgradient, and distance is greater than 100 m from the Phase One Property	FIP, CDL			1929, 1946		1930 to 1980
37	Operation of Dry Cleaning Equipment (where chemicals are used)	46	Dry Cleaning Operations - Dry cleaning operation (4 Raza Inc, Parkers Cleaners, Daniel's Dry Cleaners Ltd.) have been located at 22 Suffolk Street East from 1986 to present based on city directories and MECP waste generator records.	22 Suffolk Street	Offsite	NO		Hydraulically transgradient, and distance is greater than 100 m from the Phase One Property	CDL, ELE				82: GEN	1990 to 2010
28	Gasoline and Associated Products Storage in Fixed Tanks	47	Historical UST - the CFOT/FST database (ERIS) indicated that a 500 L fuel oil UST (single- wall steel) was installed at 21 Paisley Street in 2005 for Crewgall Properties. A furnace oil spill was reported in 2005 with soil contamination (amount not reported). The tank was delisted in 2013.	21 Paisley Street	Offsite	NO		Hydraulically upgradient/ transgradient, but distance is greater than 100 m from the Phase One Property	ELE				133: CFOT, FST 131: SPL, DNTK	
31	Ink Manufacturing, Processing and Bulk Storage	48		50 Cork Street East	Offsite	NO		Hydraulically transgradient, and distance is greater than 50 m from the Phase One Property	CDL					1939 to 1944

Notes

¹ PCA – potentially contaminating activity (as defined by O.Reg. 153/04)

² PCAs 1 to 56 were identified in the Pinchin Phase One ESA (2018), and descriptions have been updated where applicable for clarity. Additional PCAs (57 and above) were identified by Jacobs.

³ Refer to Figure 8 and 9 for PCA locations.

⁴ Regional groundwater flow was inferred to be towards Speed River (north to north-east); site-specific groundwater flow was shown to be towards the north on the north portion of the Site, and to the east on the southern portion of the Site (based on the Phase Two ESA [Jacobs, 2020]). Some of the updgradient/downgradient terminology may have changed from the Pinchin (2018) report based on this updated interpretation.

APEC = Area of Potential Environmental Concern

AST = Aboveground storage tank

CDL = City Directory Listings

ELE = EcoLog ERIS Database Search

FIP = Fire insurance plan

HER = Historical Environmental Reports ID = Identification mbgs = metres below ground surface MECP = Ontario Ministry of the Environment, Conservation and Parks offsite = Within Phase One Study area, outside the Phase One Property

onsite = Phase One Property PCA = Potentially contaminating activity PCE = tetrachloroethylene SR = site reconnaissance UST = Underground storage tank

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ²
55 Baker Street (all sections), 152 and 160 Wyndh	am Street North		
2013 – present	The Corporation of the City of Guelph	Parking Lot	Commercial	Aerial photographs from 1972 to 2009 show a parking lot over the Baker Street parcels. Based on a review of aerial photographs, the commercial development on 152 and 160 Wyndham Street North appeared to have been demolished between 2009 and 2013 and replaced with an asphalt parking lot.
55 Baker Street (all sections)			
1998 – 2013	The Corporation of the City of Guelph	Parking Lot	Commercial	Aerial photographs from 1972 to 2009 show a parking lot.
55 Baker Street,	north portion (Instrument MS200	82)		
1961 – 1998	The Corporation of the City of Guelph	Parking Lot	Commercial	Aerial photographs from 1972 to 2009 show a parking lot.
1951 – 1961	Steele's Wire Springs Ltd.	Manufacturing of coiled wire springs and wire specialties	Industrial Use	The 1960 FIP indicated that Steele's Wire Springs Limited was located on the northern portion of 55 Baker Street. In addition, city directories from 1936 until 1955 identified this operation onsite.
1941 – 1951	Frederick Freedman and James Millar	Manufacturing of coiled wire springs and wire specialties	Industrial Use	The chain of title report (Pinchin, 2018) indicated the deed transfer was from a Charles L. Dunbar, who was listed as the mortgagee. The 1946 FIP indicated that Steele's Wire Springs Limited was located on the northern portion of 55 Baker Street. In addition, city directories from 1936 until 1955 identified this operation onsite.
1926 – 1941	James Steele Limited	Manufacturing of coiled wire springs and wire specialties	Industrial Use	The chain of title report (Pinchin 2018) indicated the mortgage was put under Charles L. Dunbar on the same day of the deed transfer.
55 Baker Street,	small parcel (PIN 71287-0058 (L	Г))		
1949 – 1998	The Board of Light and Heat Commissioners of the City of Guelph	Historical transformer location.	Commercial Use	The 1960 FIP identified a small parcel on the east-central portion of 55 Baker Street labelled as transformers.
1947 – 1949	Hugh Millar and Western Lindamond	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ²
1947 – 1947	Elmer Awrey	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.
1944 – 1947	Frederick Freedman and James Millar	No records	Industrial Use	The 1946 FIP identifies the parcel of land is associated with Steele's Wire Spring Ltd. However, there are no buildings indicated in this area. The chain of title indicates the property was transferred under Power of Sale from Charles L. Dunbar.
1926 – 1944	James Steele Limited	No records	Industrial Use	The chain of title report (Pinchin 2018) indicated the mortgage was put under Charles L. Dunbar on the same day of the deed transfer.
55 Baker Street,	"Travelled Lane Through Burying	Grounds" (Instrument C	\$58221)	
1953 – 1998	The Corporation of the City of Guelph	Parking Lot	Commercial	Aerial photographs from 1972 to 2009 show a parking lot. The 1960 FIP identifies the parcel to be in the area of "bowling greens."
1934 – 1953	His Majesty The King/ Her Majesty The Queen	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use. The 1946 FIP does not show any buildings in this area.
1929 – 1934	The Culten Company Limited	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.
March 1928 – 1929	James Steele Limited	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.
Feb 1926 – March 1928	Angus Dunbar	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.
Nov 1926 – Feb 1928	James Steele Limited	No records	Industrial Use	Assumed industrial use based on the associated parcel (northern) land use.
55 Baker Street, I	north portion, "Travelled Lane", a	nd small parcel (Instrun	nent MS20082, Ins	trument CS58221 and PIN 71287-0058 (LT))
May 1926 – November 1926	Louis Brown, Sam Acker, and Sam Lampel	No records	Industrial Use	No additional observations.
May 1916 – May 1926	The White Sewing Machine Company of Canada/ White Sewing Machine Company	Sewing machine and accessory manufacturing	Industrial Use	The 1916 FIPs identified an industrial building on the west-central portion of 55 Baker Street labelled as "White Sewing Machine Co. of Canada Ltd."

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ²
April 1916 – May 1916	William Chase and Isadore Freiberger	No records	Industrial Use	No additional observations.
1900 – April 1916	The Raymond Manufacturing Company of Guelph Limited	Sewing machine and accessory manufacturing	Industrial Use	The 1911 and 1916 FIPs identified an industrial building on the west- central portion of 55 Baker Street and Park Lane labelled as "White Sewing Machine Co. of Canada Ltd."
1891 – 1900	Corporation of the City of Guelph	No records	Parkland Use	Assumed continued use from previously reported use; no additional observations.
55 Baker Street,	south portion (Instrument MS786	544)		
1968 – 1998	The Corporation of the City of Guelph	Parking Lot	Commercial Use	Aerial photographs from 1972 to 2009 show a parking lot.
1936 – 1968	The Victoria Rink Company / Guelph Curling Club Limited	Curling rink	Commercial Use	The 1946 and 1960 FIP identified a curling rink on the southern portion of 55 Baker Street. The curling club was last listed in the city directories in 1966. The chain of title (Pinchin 2018) references instrument MS78644 and indicates the Guelph Curling Club Limited was formerly The Victoria Rink Company.
1892 to 1936	The Corporation of the Township of Guelph	Curling rink	Commercial Use	The 1911 FIP identified a curling rink "Victoria Rink" on the southern portion of 55 Baker Street. The curling club was last listed in the city directories in 1966.
				The 2007 D.R. Poulton Archaeological Report indicated that the Royal Curling Club was constructed on the southern portion of 55 Baker Street in 1892, and the club merged with the Union Curling Club to form the Guelph Curling Club in 1926.
				The chain of title (Pinchin 2018) does not list a previous owner and indicates there are no records before 1891.
1891 – 1892	The Corporation of the Township of Guelph	No records	Parkland Use	Assumed continued use from previously reported use; no additional observations.

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ²
55 Baker Street	(all sections)			
1879 – 1891	Corporation of the Township of Guelph	Park	Parkland Use	The 2007 D.R. Poulton Archaeological Report indicated 55 Baker Street and Park Lane was used as a park between 1879 and 1891. The chain of title report in the Phase One ESA (Pinchin 2018) indicated no records were found prior to 1891. The first document found was a deed transfer between the Corporation of the Township of Guelph to the Corporation of the City of Guelph.
1827 – 1879	The Canada Company	Public burying grounds	Community Use	The 2007 D.R. Poulton Archaeological Report indicated 55 Baker Street and Park Lane was an active burying ground from 1827 (when the Town of Guelph was founded) until 1853. The report references the property being owned by the Canada Company and that they included the parcel on the original plan of the town as land known to be the Public Burying Ground (Poulton 2007). It is unknown how long the parcel of land was used for this purpose. The burial ground was officially closed in 1879 (Pinchin 2018) and most burials removed. The 1872 Bird's Eye View shows a naturally rolling topography.
Park Lane (PIN 7	1287-0099 (LT))			
1855 – present The Corporation of the City of Guelph Road/Laneway		Road/Laneway	Community Use	In 1855, this parcel was registered as laneways and has remained in use as laneways and/or access routes since that time (Pinchin 2018). Historical maps (1855, 1866, 1906) and FIPs (1911, 1946, and 1960) also show the parcel as a laneway.
152 Wyndham S	treet North (PIN 71287-0045 (LT))	L	
2010 – 2013	2013 The Corporation of the City of Guelph Commercial / Parking		Commercial Use	Based on a review of aerial photographs the commercial development on 152 and 160 Wyndham Street North appeared to have been demolished between 2009 and 2013 and replaced with an asphalt parking lot.
1985 – 1988	Smija Lesic	Commercial	Commercial Use	No additional observations.
1985 – 1988	Edwin Stuart and Jean Stewart	Commercial	Commercial Use	No additional observations.
1980 – 1985	District Trust Company	Commercial	Commercial Use	No additional observations.

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ² No additional observations.		
1967 – 1980	Stuart N. McInnis and Ernest E.R. Garlick	Commercial	Commercial Use			
1956 – 1967	John W. Hall	Commercial	Commercial Use	Based on a review of the 1960 FIP, as well as city directories from 1938 to 2012, 152 and 160 Wyndham Street North was used for various commercial retail operations from 1938 to at least 2009.		
1949 – 1956	John W. Hall and Nellie J. Hall	Commercial	Commercial Use	No additional observations.		
1929 – 1949	The Eaton Company	Commercial	Commercial Use	Based on a review of the 1946 FIP, as well as city directories from 1938 to 2012, 152 and 160 Wyndham Street North was used for various commercial retail operations from 1938 to at least 2009.		
1929 - 1929	Angus Dunston	Commercial	Commercial Use	No additional observations.		
1917 – 1929	Jane McAteer	Commercial	Commercial Use	No additional observations.		
160 Wyndham S	Street North (PIN 71287-0044 (LT,))				
2010 - 2013	The Corporation of the City of Guelph	Commercial / Parking lot	Commercial Use	Based on a review of aerial photographs the commercial development on 152 and 160 Wyndham Street North appeared to have been demolished between 2009 and 2013 and replaced with an asphalt parking lot.		
1987 – 2010	Green Forest Investments	No records	Commercial Use	No additional observations.		
1984 – 1987	Wyndham Street Investments Inc. or Anna Kwitco (Larina Investments)	No records	Commercial Use	No additional observations.		
1981 – 1984	Wolfond Construction Ltd.	Commercial	Commercial Use	No additional observations.		
1946 - 1981	Esther Wolfond	No records	Commercial Use	No additional observations.		
1945 – 1946	The Cullen Company	No records	Commercial Use	No additional observations.		

Phase One ESA Summary, 55 Baker Street, 15	52, 160 Wyndham Street North (and Park Lane, Guelph, Ontario
--------------------------------------------	--------------------------------	--------------------------------

Year	Name of Owner	Description of Property Use	Property Use ¹	Other Observations from Aerial Photograph, Fire Insurance Plans, etc. ²		
1917 – 1945	Jane McAteer	No records	Commercial Use	No additional observations.		
152 and 160 Wy	ndham Street North (PIN 71287-0	045 (LT) and PIN 71287	-0044 (LT))			
1910 - 1917	John McAteer	No records	Commercial Use	The 1911 and 1916 FIPs identified the American Hotel on the northern portion of 152 and 160 Wyndham Street North. The south portion of 152 and 160 Wyndham Street North was developed with a commercial building occupied by an undertaker and movie theatre.		
1895 – 1910	Elizabeth Wagner	No records	Commercial Use	No additional observations.		
1891 - 1895	Thomas Ellis	Commercial	Commercial Use	Information provided in the 2007 D.R. Poulton Archaeological Report indicated that 152 and 160 Wyndham Street North was developed with assumed commercial buildings between 1862 and 1872; however, the occupants of the buildings were not identified, and the buildings' construction dates are unknown.		
1855 - 1891	The Canada Company	Unknown	NA	No additional observations.		

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Notes:

Information presented in this table has been taken from Pinchin's Phase One Environmental Site Assessment, 55 Baker Street, 152, 160 Wyndham Street North, Chapel and Park Lane, Guelph, Ontario, dated October 30, 2018.

PINs and Instruments referenced above are as shown on Registered Plan 61R-21815, dated June 22, 2020.

FIP = fire insurance plan

Commercial or Industrial Property Uses are shown in italicized font.

^{1.} Types of property use as defined in Ontario Regulation 153/04. Permitted uses include Agricultural or other, Commercial, Industrial, Parkland, Residential.

^{2.} Additional information was obtained from the city directories, historical reports, title search, Site observations, interviews, and aerial photographs documented in the Pinchin report (2018) and supplemented by Jacobs with any readily available information.

Table 3. Areas of Potential Environmental Concern

55 Baker Street, 152 and 160 Wyndham Street North, and Park Lane, Guelph, Ontario

Area	s of Potential Environmental Concern ^a	Location of Area of Potential Environmental Concern on Phase One Property		Potentially Contaminating Activity ^b	Location of PCA (on-site or off-site) ^c	Contaminants of Potential Concern ^d	Media Potentially Impacted (Groundwater, soil and/or sediment)
APEC-1	Historical Industrial Property Use	55 Baker Street Park Lane	34	Metal Fabrication	Onsite	Metals, hydride-forming Metals, ORPs (Hg, CrVI, B- HWS, CN-, EC, SAR), PHCs, PAHs, VOCs, BTEX	Soil and Groundwater
APEC-2	Unknown/Poor Quality Fill Material	Entire Site	30	Importation of Fill Material of Unknown Quality	Onsite	Metals, hydride-forming Metals, ORPs (Hg, CrVI, B- HWS, CN-, EC, SAR), PHCs, PAHs, VOCs, BTEX	Soil and Groundwater
APEC-3	Historical Transformers	East-central portion of 55 Baker Street	55	Transformer Manufacturing, Processing and Use	Onsite	PHCs, BTEX, PCBs, PAHs	Soil
APEC-4	Use of Road Salts	Entire Site	48	Salt Manufacturing, Processing and Bulk Storage	Onsite	EC, SAR, sodium, chloride	Soil and Groundwater
APEC-5	Historical Dry Cleaning	North portion of 55 Baker Street	37	Operation of Dry Cleaning Equipment (where chemicals are used)	Offsite - North	VOCs	Groundwater
APEC-6	Historical Retail Fuel Outlet, Historical UST, Historical Automotive repair/servicing and Historical Iron Foundry	North portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Offsite - North	Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Groundwater
			28	Gasoline and Associated Products Storage in Fixed Tanks			
			32	Iron and Steel Manufacturing and Processing			
APEC-7	Potential Historical Dry Cleaning	North portion of 55 Baker Street	37	Operation of Dry Cleaning Equipment (where chemicals are used)	Offsite - North	VOCs	Groundwater
APEC-8	Potential Historical Dry Cleaning, Historical Garage and Historical UST	North portion of 160 Wyndham Street North and northeast portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Offsite - Northeast	Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Groundwater
			20	Gasoline and Associated Products Storage in Fixed Tanks			
			37	Operation of Dry Cleaning Equipment (where chemicals are used)			
APEC-9	Historical Fuel Oil UST	North portion of 55 Baker Street	28	Gasoline and Associated Products Storage in Fixed Tanks	Offsite - Northeast	PHCs, VOCs, BTEX, PAHs, Metals (Lead)	Groundwater
APEC-10	Historical Automotive Repair	Northeast portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Offsite - Northeast	Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Groundwater
APEC-11	Historical Off-Site Industrial Operations, Historical UST and Historical Fuel Oil Tank	West-central portion of 55 Baker Street	34	Metal Fabrication	Offsite - West	Metals, hydride-forming Metals, ORPs (Hg, CrVI, B- HWS, CN-, EC, SAR), PHCs, PAHs, VOCs, BTEX	Groundwater
			28	Gasoline and Associated Products Storage in Fixed Tanks			
APEC-12	Historical Automotive Garage, Historical USTs and Historical Industrial Operations	West-central portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Offsite - West	Metals, hydride-forming Metals, ORPs (Hg, CrVI, B- HWS, CN-, EC, SAR), PHCs, PAHs, VOCs, BTEX	Groundwater
			28	Gasoline and Associated Products Storage in Fixed Tanks			
			34	Metal Fabrication			
APEC-13	Historical Automotive Garage	South portion of 152 Wyndham Street North	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Offsite - East	Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Groundwater
APEC-14	Historical Gasoline Spill	Southwest corner of 55 Baker Street	Other	Activity not defined in O. Reg. 153/04 Table 2 of Schedule D	Offsite - South	PHCs, PAHs, Metals (Lead) ª, VOCs (MTBE), BTEX	Groundwater
APEC-15	Historical Dry Cleaning	Southeast portion of Park Lane	37	Operation of Dry Cleaning Equipment (where chemicals are used)	Offsite – East	VOCs	Groundwater
APEC-16	Historical AST and UST	Southwest corner of 55 Baker Street	28	Gasoline and Associated Products Storage in Fixed Tanks	Offsite - South	PHCs, VOCs, BTEX, PAHs, Metals (Lead)	Groundwater

Table 3. Areas of Potential Environmental Concern

55 Baker Street, 152 and 160 Wyndham Street North, and Park Lane, Guelph, Ontario

Area	s of Potential Environmental Concern ^a	Location of Area of Potential Environmental Concern on Phase One Property		Potentially Contaminating Activity ^b	Location of PCA (on-site or off-site) ^c	Contaminants of Potential Concern ^d	Media Potentially Impacted (Groundwater, soil and/or sediment)
		Northwest portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles		Metals, hydride-forming Metals, ORPs (Hg, CrVI, B- HWS, CN-, EC, SAR), PHCs, PAHs, VOCs, BTEX	Groundwater
			28	Gasoline and Associated Products Storage in Fixed Tanks			
			37	Operation of Dry Cleaning Equipment (where chemicals are used)			
			34	Metal Fabrication			
			57	Vehicles and Associated Parts Manufacturing			
APEC-18	Former Oil Shed	Southwest portion of 55 Baker Street	28	Gasoline and Associated Products Storage in Fixed Tanks		Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Soil and Groundwater
APEC-19	Former Oil House	Western portion of 152 Wyndham Street North	28	Gasoline and Associated Products Storage in Fixed Tanks		Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Soil and Groundwater
APEC-20	Former Coke Storage	Northeast portion of 55 Baker Street	Other	Activity not defined in O. Reg. 153/04 Table 2 of Schedule D		Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX, ABNs	Soil and Groundwater
APEC-21	Former Garage	Northeast portion of 55 Baker Street	27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles		Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Soil and Groundwater
APEC-22	Historical Dry Cleaning Operations, Historical UST and Former Coal Yard	Southwest portion of 55 Baker Street	28	Gasoline and Associated Products Storage in Fixed Tanks		Metals, hydride-forming Metals, ORPs (Hg, CrVI), PHCs, PAHs, VOCs, BTEX	Groundwater
			37	Operation of Dry Cleaning Equipment (where chemicals are used)			
			Other	Activity not defined in O. Reg. 153/04 Table 2 of Schedule D			

Notes:

^a APEC means the area on, in, or under a Phase One Property where one or more contaminants are potentially present, as determined through the Phase One ESA, including through (a) identification of past or present uses on, in, or under the Phase One Property; and (b) identification of PCAs.

APECs 1 to 16 were identified in the Pinchin (2018) Phase One ESA. Additional PCAs were added to offsite APECs 6, 11 and 12 as part of the Phase One ESA Update. APECs 17 to 23 identified by Jacobs. Metals as a COPC were removed from APEC-14 by Jacobs as the gasoline spill occurred in 2003.

^b PCA – potentially contaminating activity means a use or activity as set out in Column A of Table 2 of Schedule D of O. Reg. 153/04 that is occurring or has occurred in a Phase One study area.

^c "Onsite" refers to within the Phase One/Two Property; "Offsite" refers to the Phase One Study Area.

^{d.} Contaminants of potential concern were identified using the Method Groups as identified in the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act, March 9, 2004, amended as of July 1, 2011.

ABN = Acid Base Neutrals APEC = Area of Potential Environmental Concern B-HWS = hot water soluble boron BTEX = benzene, toluene, ethylbenzene and xylenes CN- = cyanide COPC = contaminant of potential concern CrVI = hexavalent chromium EC = electrical conductivity Hg = mercury MTBE = methyl tert-butyl ether O. Reg. = Ontario Regulation ORP = other regulated parameter PAH = Polyaromatic Hydrocarbons PCB = Polychlorinated biphenyl PHC = Petroleum Hydrocarbons SAR = sodium adsorption ratio UST = underground storage tank VOC = Volatile Organic Compounds

Table 4. Phase One Conceptual Site Model

Phase One ESA Summary, 55 Baker Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario

Phase One ESA Summary, 55 Bar	er Street, 152, 160 Wyndham Street North and Park Lane, Guelph, Ontario
Phase One CSM Element	Summary
Existing Buildings and Structures	No buildings exist on the Phase One Property. The Site consists of two asphalt parking lots (55 Baker Street, 152 and 160 Wyndham) and
	an asphalt laneway (Park Lane). Historical buildings are presented on Figure 2.
Identify Water Bodies in the Phase	The Speed River is located approximately 130 to 150 m north-northeast of the Phase One Property.
One Study Area	
Areas of Natural Significance	No areas of natural significance were identified within the Phase One Study Area.
Presence of Drinking Water Wells	No drinking water wells were identified on the Phase One Property. The Site and surrounding properties are serviced with potable water obtained from municipal groundwater supply wells located within the City of Guelph. Water wells within 500 m of the Site listed in the Ontario Water well records database are shown on Figure 6.
	Figure 7 presents the roadways and land uses within the Phase One Study Area.
Study Area Adjacent Property Uses	Figure 7 and Figure 2 of the Dhase One FCA (Direction 2010) presents the adjacent presents used
Aujacent Property Oses	 Figure 7 and Figure 3 of the Phase One ESA (Pinchin, 2018) presents the adjacent property use: To the north: commercial/industrial and residential To the east: commercial/industrial and mixed use residential/commercial To the south: residential, commercial/industrial and mixed use residential/commercial
	• To the west: residential, commercial/industrial and mixed use residential/commercial
Identify PCAs in the Phase One	A total of 129 PCAs were identified in the Phase One Study Area and are shown on Figure 8 and 9 along with approximate locations of historical USEs. Details and descriptions of the DCAs are provided in Table 1 and indicate which DCAs result in an ADEC.
Study Area	historical USTs. Details and descriptions of the PCAs are provided in Table 1, and indicate which PCAs result in an APEC.
Identify APECs	The Phase One ESA (Pinchin, 2018) and Jacobs identified twenty-two APECs for the Phase One Property, eight attributable to onsite PCAs, and 14 attributable to offsite PCAs. APECs and are listed in Table 3 and located on Figure 10.
COPCs	The COPCs identified by Jacobs from a review of the Phase One ESA (Pinchin, 2018) include metals (including hydride-forming metals), other regulated parameters (hot water soluble (HWS) boron, cyanide, EC, SAR, sodium, chloride, mercury, hexavalent chromium), VOCs, BTEX, PHCs, PAHs, dioxins/furans and ABNs.
Presence of Underground Utilities	Underground utilities on the Phase One Property provide electrical services to the light standards and pay meters, in addition to storm sewers which provide the drainage to the parking lots. The Site Representative indicated that a parking attendant building was recently demolished in 2016 on the west central portion of the property. The building was serviced by municipal water and was connected to the sanitary sewer system. Additionally, several buildings were historically present on the Phase One Property as shown on Figure 2. It is unclear if utilities associated with these former buildings remain on the Phase One Property. Estimated depths of the utilities are 1 mbgs for electrical utilities, and 3 mbgs for storm sewers. Previous reports indicate that groundwater was encountered at depths of approximately 3.5 to 8.9 mbgs, therefore utility corridors are expected to be present above the water table and would not act as a preferential pathway for contaminant distribution and transport. It is unclear if historical utilities resulting from the historical industrial use on the Phase One Property are still present. Known utilities are presented on Figure 3.
Regional/Local Geology	The Phase One Property and surrounding properties are located within the physiographical area identified as the Guelph Drumlin Field. Glacial fluvial outwash deposits of sands and gravel occur, underlain in places by fine-grained silts and clays, overlying dolostone bedrock. Native subsurface materials encountered during previous investigations (XCG, 2008), consisted of silty sand, silt and gravel, cobbles, sand and silt. No bedrock outcrops were observed on Site or in the surrounding area. Based on information provided in previous investigations (XCG, 2008), the overburden thickness ranges between approximately 4.3 and 7.3 m.
Regional/Local Hydrogeology	The Phase One Property is relatively flat, with a slight slope to the south. The surrounding area slopes gradually to the south and east towards the Speed River as shown on Figure 4. The Speed River is located 130 m north-northeast and 440 m east of the Site, and flows southeast and discharges into the Grand River located approximately 19 kilometres south of the Site. Based on an elevation survey completed as part of previous investigations (XCG, 2008) the groundwater at the Site flows in an east-southeast direction towards the Speed River.
Uncertainties Affecting the Validity of Phase One CSM	On the basis of the uncertainties presented within the Phase One ESA report, it is possible that a PCA/APEC or land use has not been identified within the individual components of the Phase One ESA. Information was gathered from numerous sources (that is, aerial photographs, City Directories, database searches, historical reports, interviews, and site reconnaissance), which decreases the chance that a major PCA or land use was not identified in this Phase One ESA. Many aspects of the CSM have been previously studied and verified through subsurface investigations (for example, groundwater flow direction); these aspects are not directly affected by the noted uncertainties: Quality of aerial photographs may not allow some features to be clearly identified, and professional judgment was used to relate the historical features identified in the aerial photographs to present day locations Municipal addresses are known to change Information provided by interviewed individuals, could be based on hearsay or personal opinion

Notes:

This Phase One Conceptual Site Model was prepared by Jacobs based on the Phase One Environmental Site Assessment prepared by Pinchin (2008) and the information reviewed as part of the Phase One ESA Update.

PCA = Potentially Contaminating Activity Phase One Property = 55 Baker Street, 152 and 160 Wyndham Street N, Park Lane PHC = Petroleum hydrocarbon

mbgs = metre(s) below ground surface

PAH = Polycyclic aromatic hydrocarbon

SAR = sodium adsorption ratio

UST = underground storage tanks

VOC = volatile organic compound(s)

ABN = Acid base neutral

APEC = Areas of Potential Concern

BTEX = benzene, ethylbenzene, toluene and xylenes

COPC = Contaminant of Potential Concern

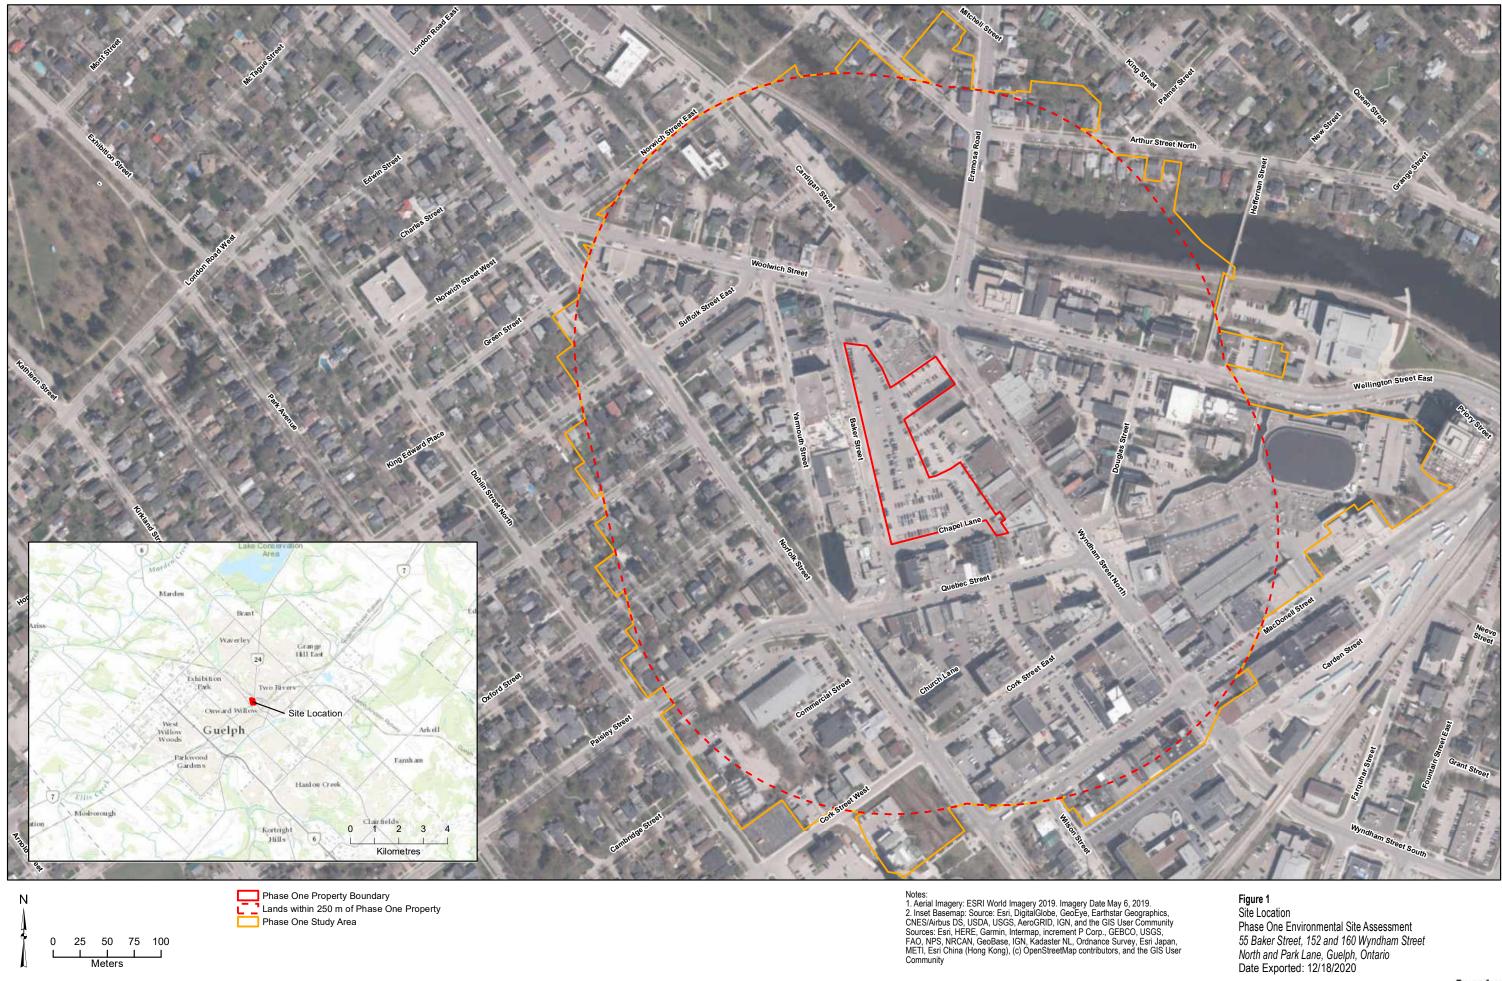

CSM = Contaminated Sites Model

EC = electrical conductivity

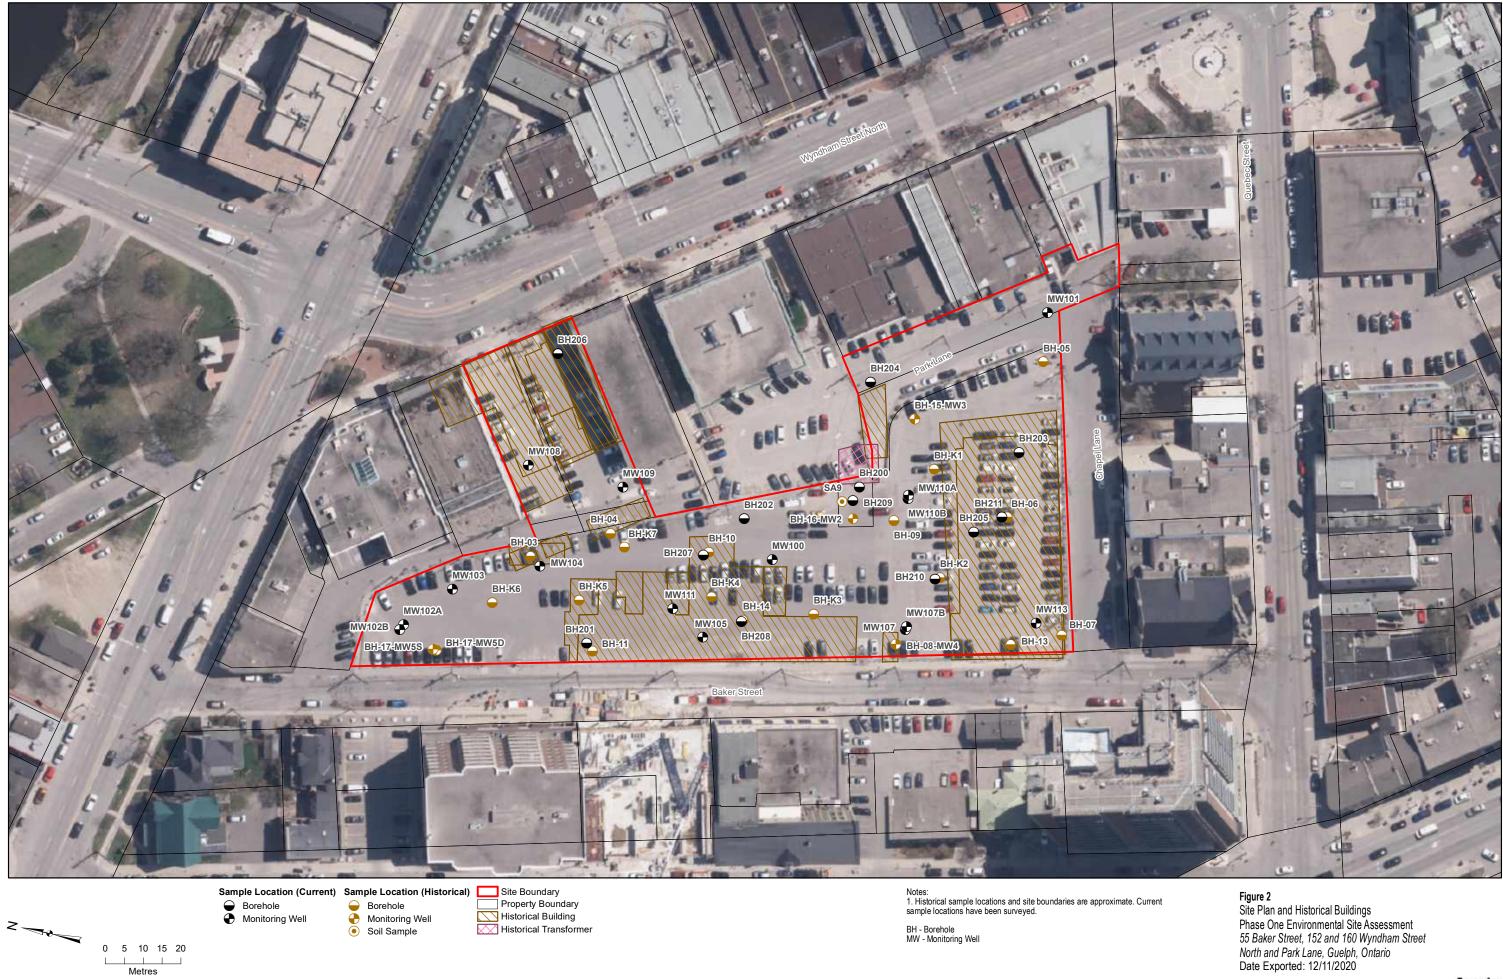

ESA = Environmental Site Assessment

masl = metre(s) above sea level

Attachment B. Updated Environmental Report Summaries

Jacobs Engineering Group Inc. 2020. *Draft* Phase Two Environmental Site Assessment, 55 Baker Street, 152 Wyndham Street North, 160 Wyndham Street North, and Park Lane, Guelph, Ontario. Prepared for the City of Guelph.

This summary provides an overview of the Jacobs Engineering Group Inc. (Jacobs) Phase Two Environmental Site Assessment (ESA) work completed at the properties located at 55 Baker Street, 152 Wyndham Street North, and 160 Wyndham Street North, as well as the right-of-way known as Park Lane in Guelph, Ontario (Phase Two Property or Site). The Phase Two ESA is based on investigations Jacobs conducted between July 2019 and April 2020 (Jacobs 2020) and historical investigations conducted by XCG (2008). Jacobs understands the City is considering redeveloping the property for a mix of residential, community, and institutional use.

The City of Guelph (City) retained Jacobs to provide environmental services for the 1.14-hectare Site, which is in downtown Guelph, southwest of Speed River. The Site is currently in use as a commercial parking lot and includes one laneway. No buildings are currently located onsite; however, buildings were historically present and associated with the use of portions of the Site for parkland, commercial, and industrial purposes. From approximately 1827 to 1879, the parcel associated with 55 Baker Street was used a public burial ground (community land use).

Jacobs developed the field program for the Phase Two ESA based on the results of the Phase One ESA (Pinchin 2018) and to provide general spatial coverage across the Site. The field components of the project included utility locating, archaeological clearances, monitoring well drilling and installation, soil and groundwater sampling, surveying, and water level elevation measurements. Jacobs and its subcontractors completed the field components, documented herein.

The objectives of the Phase Two ESA were to:

- Meet current Ontario Regulation (O. Reg.) 153/04, (MECP 2011a) requirements to support Record of Site Condition (RSC) filing.
- Investigate or further investigate areas of potential environmental concern (APECs) identified during the Phase One ESA (Pinchin 2018).
- Provide data to support a potential risk assessment (RA).

Analytical data from a total of 14 historical investigative locations across the Site were considered reliable for use in the current Phase Two ESA. A total of 27 investigative locations were advanced across the Phase Two Property in 2019 and 2020. Analytical data from 36 soil sampling locations and an additional 5 groundwater-only sampling locations were used to evaluate contaminants of concern (COCs) as part of the Phase Two ESA (Jacobs 2020).

The Phase Two ESA activities included the following main tasks:

- Arrange for public and private underground utility locates.
- Arrange for archeological services related to the historical use of the property as a burial ground.
- Develop a sampling and analysis plan (SAP) based on Phase One ESA findings and historical subsurface investigations.

- Drill boreholes during several field events:
 - July to August 2019 Jacobs advanced 16 boreholes (BH200 through BH206 and MW100, MW101, MW102A, MW102B, MW103 through MW105, and MW107 through MW109) to a maximum depth of 8.23 metres below ground surface (mbgs). Soil samples were collected for chemical analysis. Ten boreholes were completed as monitoring wells.
 - September to December 2019 Jacobs advanced nine boreholes (BH208 through BH211 and MW107B, MW110A, MW110B, MW111) to a maximum depth of 15.39 mbgs. Soil samples were collected from four of the locations. Four boreholes were completed as monitoring wells.
 - April 2020 Jacobs advanced two boreholes (BH207 and MW113) to a maximum depth of
 8.38 mbgs. Soil samples were collected, and one borehole was completed as a monitoring well.
- Collect at least two rounds of groundwater samples from the newly installed monitoring wells for COCs to address identified APECs.
- Conduct single-well hydraulic tests on five monitoring wells to improve the understanding of the subsurface materials' hydraulic properties across the Phase Two Property.
- Determine the applicable Site Condition Standards (SCS).
- Survey the monitoring wells to a geodetic benchmark.

Soil and groundwater data was compared to the *Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition for coarse grained soil and residential/parkland/institutional land use* (Table 2 SCS) because the groundwater in the vicinity of the Phase Two Property does and will serve as a raw water supply for a drinking water system.

Soil environmental conditions were characterized based on the evaluation of historical samples, in addition to the recent investigations conducted for the Phase Two ESA. Soil conditions were characterized using the Phase Two ESA sampling and reliable historical data, comprising 95 soil samples from 36 locations across the Phase Two Property. Soils on the Phase Two Property were found to be generally impacted with elevated concentrations of other regulated parameters (ORPs); specifically, electrical conductivity (EC) and sodium adsorption ratio (SAR). Localized metals (lead and mercury) were also identified in a limited area at the Phase Two Property. The presence of these parameters is consistent with the Site's historical and industrial land uses.

The following points summarize the quality of the soil samples that exceeded the Table 2 SCS:

- Elevated concentrations of EC and SAR were identified in soil across most of the Phase Two Property, except for the northeastern portions of the 152 and 160 Wyndham Street North parcels. Concentrations ranged from 0.0902 to 2.95 milliSiemens per centimetre (mS/cm) and 0.15 to 108 SAR, respectively. Maximum concentrations were identified at MW102B (EC) and MW113 (SAR) in the fill. Exceedances of EC and SAR in soil across the Phase Two Property were identified to a maximum depth of 0.792 mbgs (MW102B). The presence of EC and SAR at the Site is related to the application of salt on the parking lot surface during winter conditions. Under Paragraph 1 of Section 49.1 of the revised O. Reg. 153/04, the SCS is deemed to not be exceeded for the purpose of Part XV.1 of the Act if a substance is applied to surfaces for the safety of vehicular or pedestrian traffic under snow or ice conditions or both; therefore, EC and SAR are not considered to be COCs.
- Metals exceedances were limited to lead and mercury, which were identified in the southeastern
 portion of the Phase Two Property at MW101, within fill material between 0.46 and 0.61 mbgs. The
 other soil samples collected across the Phase Two Property had concentrations of metal parameters

less than the Table 2 SCS, including samples Jacobs collected during the current investigation to confirm the absence of metals where historical exceedances¹ were identified.

One historical sample (BH-14) identified PAH exceedances within the west-central portion of the Site: elevated concentration of dibenzo[a,h]anthracene (0.13 micrograms per gram [µg/g]) between 0.8 and 1.4 mbgs within the fill materials. In November 2019, BH208 was drilled in the same location as historical BH-14, and PAH samples were collected within the same sampling interval, as well as from a lower interval (2.29 to 2.44 mbgs), and the results were less than the Table 2 SCS. The combined average of the samples collected at the same depth interval met the Table 2 SCS. It is the QPESA's opinion that the historical exceedance was likely related to the presence of asphalt directly above the sampling location and is not considered representative of soil conditions on the Site.

Groundwater across the Phase Two Property was evaluated using data from 39 samples collected from 15 monitoring wells. Groundwater across the Phase Two Property was found to be generally impacted with elevated concentrations of sodium and chloride, with localized impacts of metals (specifically, cadmium).

The following points summarize the quality of the groundwater samples exceeding the Table 2 SCS:

- Chloride and sodium exceedances were identified in groundwater throughout the Phase Two Property. Maximum concentrations of chloride (9,610 micrograms per gram [µg/L]) and sodium (6,100,000 µg/L) in groundwater were identified at the northern end of the Site in MW102B. The presence of sodium and chloride at the Site is related to the application of salt on the parking lot surface during winter conditions. Under Paragraph 1 of Section 49.1 of the revised O. Reg. 153/04, the SCS is deemed to not be exceeded for the purpose of Part XV.1 of the Act if a substance is applied to surfaces for the safety of vehicular or pedestrian traffic under conditions of snow or ice, or both; therefore, chloride and sodium are not considered to be COCs.
- Metals exceedances in groundwater were limited to cadmium and identified at two monitoring wells (MW107 and MW113), near the southwestern property boundary. Maximum concentrations were reported at MW113 (6.17 µg/L), screened between 5.3 and 8.4 mbgs. Exceedances were vertically delineated by MW107B (13.5 to 15.4 mbgs), where concentrations were less than the Table 2 SCS.
- Elevated concentrations of chloroform were reported in samples, and the source of the exceedance was believed to be related to the municipal water that was used during the bedrock coring process. Based on the available information, the QPESA determined there was a discharge of drinking water (within the meaning of the *Safe Drinking Water Act, 2002*), resulting in chloroform exceeding the SCS. Under paragraph 2 of Section 49.1 of the revised O. Reg. 153/04, the SCS is deemed to not be exceeded for the purpose of Part XV.1 of the Act. Additional details are provided in the Phase Two ESA (in draft) (Jacobs 2020).

¹ Historical metals exceedances (including for cadmium, copper, lead, and zinc) were identified in the northern and central portions of the Site (BH-19-MW6, BH-K3, SA9, BH-K2, and BH-06). These historical data were not collected or analyzed using O. Reg. 153/04 protocols; therefore, these data are not considered reliable for the Phase Two ESA. All historical metal exceedances were resampled in the current investigation and are documented in the Phase Two ESA (in draft) (Jacobs 2020).

Jacobs Engineering Group. 2020. Pre-Submission Form and Modified Generic Risk Assessment, 55 Baker Street, 152 Wyndham Street North, 160 Wyndham Street North, and Park Lane, Guelph, Ontario. Prepared for the City of Guelph.

The City of Guelph (City) has retained Jacobs Engineering Group Inc. (Jacobs) to provide environmental services for the properties located at 55 Baker Street, 152 Wyndham Street North, and 160 Wyndham Street North, as well as the right-of-way known as Park Lane in Guelph, Ontario, hereafter referred to as the "Risk Assessment (RA) Property" or "Site". Jacobs relied on the Pinchin Phase One Environmental Site Assessment (ESA) (Pinchin 2018) and completed Phase Two ESA investigations (Jacobs 2020; draft) to support site characterization, development of a conceptual site model (CSM) and RA in advance of redevelopment of the Site to mixed residential, commercial, community, and institutional use. Since the previous site land use was commercial/community use, a change in land use to a more sensitive mixed residential, commercial, commercial, a Record of Site Condition (RSC) under Section 168.3.1 of the *Environmental Protection Act* (MECP 1990).

The RA Property is approximately 1.14 hectares in size and is located in downtown Guelph, southwest of Speed River. The Site is currently in use as a commercial parking lot and includes one laneway. No buildings are currently located onsite; however, buildings were historically present and associated with the use of portions of the Site for parkland, commercial, and industrial purposes. From approximately 1827 to 1879, the parcel associated with 55 Baker Street was used a public burial ground (community land use).

The applicable site condition standards (SCS) are the *Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition for coarse grained soil and residential/parkland/institutional land use* (Table 2 SCS) because the groundwater in the vicinity of the RA Property does and will serve as a raw water supply for a drinking water system.

This RA was prepared in accordance with Ontario Regulation (O. Reg.) 153/04 (MECP, 2011a). Therefore, this RA is based on the principles and guidelines for RAs as described in the Ontario Ministry of the Environment, Parks and Conservation (MECP) documents *Procedures for the Use of Risk Assessment under Part XV.1 of the Environmental Protection Act* (MECP, 2005), together with Schedule C, Table 1 of O. Reg. 153/04 (MECP 2011a), and the *Rationale for the Development of Soil and Ground Water Standards for Use at Contaminated Sites in Ontario* (Rationale Document) (MECP 2011b). The RA was completed as a Modified Generic Risk Assessment (MGRA) using the 2016 MECP MGRA model. The MGRA provides a streamlined approach to developing property specific standards for the RA Property using an approved model.

The objectives of the RA are as follows:

- Assess the risk from potential exposure to soil and groundwater to existing and potential future human receptors who may use the RA Property, assuming most of the contaminants of concern (COCs) are managed in place.
- Assess risk to terrestrial ecological receptors from potential exposure to COCs in soil and groundwater at the RA Property.
- Develop Property-specific Standards (PSSs) for COCs in soil and groundwater at the RA Property.
- Develop a risk management plan to mitigate or minimize unacceptable risks.

The purpose of the risk management is to reduce receptors' potential risk to acceptable target levels (that is, for human receptors, the incremental lifetime cancer [ILCR] is reduced to less than or equal to 1×10^{-6} , and the human health hazard quotient [HQ] is reduced to less than or equal to 0.2 [or less than or equal to 0.5 for petroleum hydrocarbons {PHCs} or trichloroethylene {TCE} {inhalation pathway only}], and for ecological receptors, the ecotoxicity screening quotient [SQ] is reduced to less than or equal to 1).

The receptors identified for the Site were:

- Residents
- Indoor Workers
- Outdoor Workers
- Recreational Users and;
- Utility Workers
- Ecological Receptors (soil invertebrates, terrestrial plants, birds and mammals, and offsite aquatic receptors)

The predicted risk for either human or ecological receptors exceeded the MECP target levels for the following parameters:

- Lead and mercury in soil
- Cadmium in groundwater

The specific risk mitigation measures (RMMs) selected in the MGRA (MECP 2016) recommended to meet the risk management performance objectives include:

- 1) Fill or Hard Cap asphalt or concrete cap or a soil cap > 1 metre thick
- 2) Building with a storage garage with intermittent ventilation
- 3) No groundwater use for drinking water

Additional supplemental RMMs selected for the protection of subsurface workers include:

- 1) A health and safety plan
- 2) Soil and groundwater management plan

Database: SPL Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. Note: Databases denoted with "*" indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.* Government Publication Date: Sept 2002*

Aggregate Inventory:

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage. Government Publication Date: Up to Sep 2020

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Abandoned Mine Information System:

Anderson's Waste Disposal Sites:

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated. Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type. Government Publication Date: 1999-Jun 30, 2020

Borehole: BORE A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW. Certificates of Approval:

Dry Cleaning Facilities:

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities. Environment and Climate Change Canada cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA).

Government Publication Date: Jan 2004-Dec 2017

Please refer to those individual databases for any information after Oct.31, 2011.

Commercial Fuel Oil Tanks:

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information. Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Government Publication Date: 1985-Oct 30, 2011*

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the

Inventory of Coal Gasification Plants and Coal Tar Sites:

have been found guilty of environmental offenses in Ontario courts of law.

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.* Government Publication Date: Apr 1987 and Nov 1988*

Drill Hole Database:

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2019

Delisted Fuel Tanks:

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information. Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry: EASR On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database. Government Publication Date: Oct 2011-Nov 30, 2020

Environmental Registry: Provincial FBR The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Oct 31, 2020

Environmental Compliance Approval:

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data. Government Publication Date: 1992-2007*

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jul 31, 2020

Environmental Issues Inventory System:

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed. Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Contaminated Sites on Federal Land:

Federal Convictions: FCON Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty. Government Publication Date: 1988-Jun 2007*

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Sep 2020

Fisheries & Oceans Fuel Tanks:

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation. Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank: FST List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information. Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May

1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Fuel Storage Tank - Historic:

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jul 31, 2020

Greenhouse Gas Emissions from Large Facilities:

dioxide equivalents (kt CO2 eq). Government Publication Date: 2013-Dec 2018

Provincial **TSSA Historic Incidents:** List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here. Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation. Government Publication Date: 1950-Aug 2003*

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Fuel Oil Spills and Leaks:

Landfill Inventory Management Ontario:

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status. Government Publication Date: Feb 28, 2019

Canadian Mine Locations: MINE This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Mineral Occurrences:

regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in

Government Publication Date: 1846-Jan 2020

National Analysis of Trends in Emergencies System (NATES):

significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released. Government Publication Date: 1974-1994*

Non-Compliance Reports: NCPL The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks:

DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database. Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

National Defence & Canadian Forces Waste Disposal Sites:

under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered. Government Publication Date: Mar 1999-Apr 2018

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status. Government Publication Date: 2001-Apr 2007*

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Sep 30, 2020

National Energy Board Pipeline Incidents:

National Energy Board Wells:

449

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. Government Publication Date: 1993-May 2017

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All

Inventory of PCB Storage Sites: OPCB The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Pesticide Register:

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Nov 30, 2020

Pipeline Incidents:

Permit to Take Water:

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness. Government Publication Date: Oct 31, 2020

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Private and Retail Fuel Storage Tanks:

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water. Government Publication Date: 1994-Oct 31, 2020

Ontario Regulation 347 Waste Receivers Summary: REC Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data. Government Publication Date: 1986-2016

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Sep 2020

Retail Fuel Storage Tanks:

Scott's Manufacturing Directory:

Record of Site Condition:

or propane storage tanks. Government Publication Date: 1999-Jun 30, 2020

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: SPL List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain

Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database. Government Publication Date: Oct 2011-Nov 30, 2020

WDSH In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report. This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

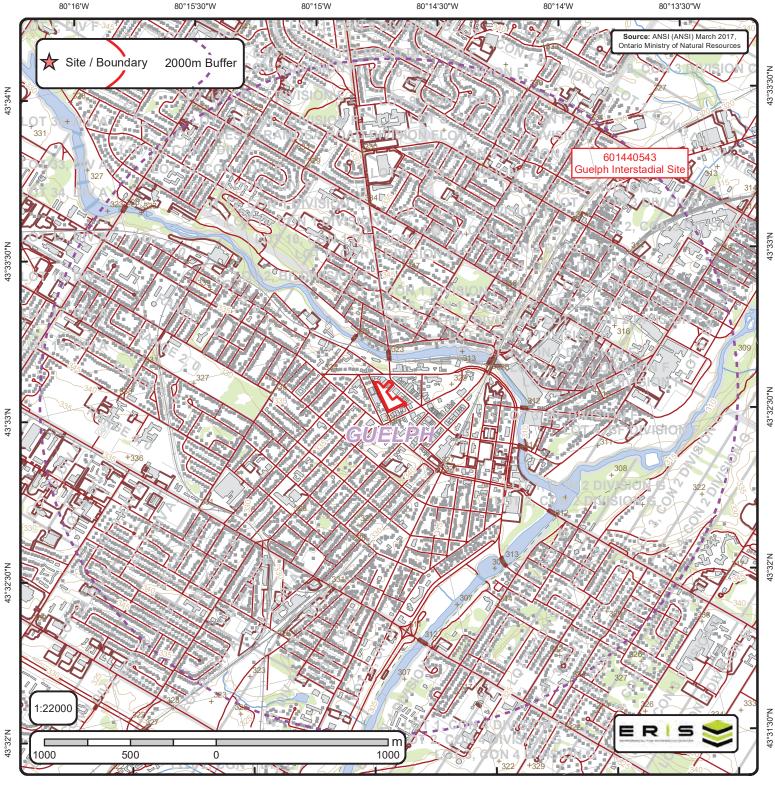

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

<u>Map Key:</u> The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

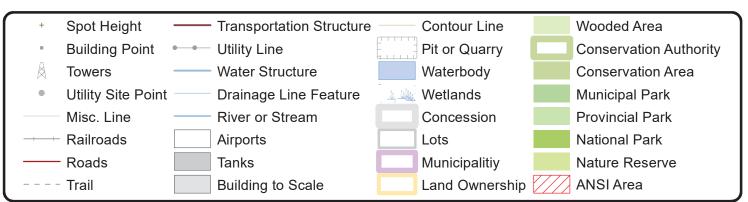

<u>Unplottables:</u> These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
